

Hydrogen Gas Detector Remote Mimic Panel

Features

- Small Size: 3" x 5"
- Available for 1, 2, or 3 detectors
- Push to Test button
- Three LED status indicators
- 80db warning buzzer
- 5 Year Warranty

Benefits

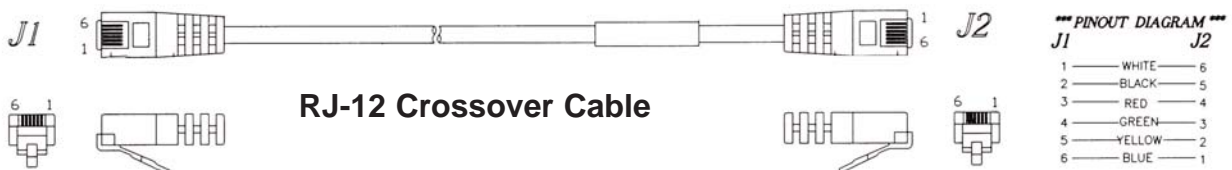

- Permits monitoring the H² detectors from a remote location.
- Monitor up to three detectors from a single station.

What is the Mimic Panel?

The Mimic Panel is a small monitor box that duplicates the LED indicator lights, the audible warning buzzer, and the push-to-test button on the HGD series hydrogen gas detectors. The Mimic Panel is connected to the remote hydrogen gas detectors with standard crossover six-wire telephone cables. See below.

- 1) Small footprint, easy installation.
- 2) May be located up to 1000' away
- 3) Powered by the remote Hydrogen Gas Detectors

The green LED indicates the HGD is powered up, the yellow LED lights up when 1% hydrogen is detected. The red LED lights and the warning buzzer comes on at 2% hydrogen.
