

Worried about your power quality equipment?

Do your research and you'll choose Eaton.

It's not a choice you face often, but it's a critical one. Trusting the wrong brand with your business' power needs can set you up for years of inconsistent quality, lost productivity and unreliable service. Eaton has been providing insight, innovation and superior engineering for more than a century, and you'll benefit from that expertise every day as an Eaton customer.

Partnership and Integration

Unlike competitors who focus narrowly on their own enterprise offering, Eaton partners with industry leaders that allow our equipment to be integrated into a customer's existing infrastructure. Our compatibility with VMware vCenter and Citrix XenCenter enables faster access to data and avoids a lengthy learning curve with brand new software.

Virtualization and Control

Eaton's Intelligence Power Manager software integrates into the VMware and Citrix hypervisors with a simple dashboard display. This added functionality allows you to maintain business continuity by easily automating the ability to move, consolidate or suspend virtual machines (VM) in the event of a power disruption. IPM is easily implemented with an unlimited number of VM hosts or virtual machines.

Intelligent Power Manager

Award-Winning Form and Function

A clear LCD display and easy-to-understand alerts are essential during a prolonged power event, and that's what you'll find on Eaton equipment. Inside, a sophisticated sensing circuitry warns you of impending battery failure. Eaton also leads the industry in accommodating denser data center environments with smaller-footprint designs.

Warranty and Support

Unlike our competitors, Eaton's 3-year UPS warranty includes the battery, which can be a major cost factor over the life of a UPS. Our service and support teams have global reach and 24/7 capability. We continually invest in our field technicians with extensive training.

Powerful Industry Recognition

Eaton was recently voted the **Overall Winner** in the **Power Protection & Management** category of CRN's 2020 Annual Report Card (ARC). Not only did Eaton achieve the highest overall score, but we also ranked #1 in all four categories: Product Innovation, Support, Partnership, and Managed and Cloud Services. Continuing the accolades, CRN recognized Eaton's 5P Lithium-Ion UPS as both the **Technology category winner** and **Overall Product of the Year** in Power Management Software and Tools. It's quite an honor when our efforts are praised by the solution providers driving our business.
