Eaton is announcing the launch of the Samsung Gen3 Battery Cabinet.

Eaton is announcing the completion of our first ship-complete Lithium battery cabinet. The cabinet is compatible with the 93PM, 9395P, and 9395XC UPS families. Battery cabinets will now ship complete to the customer site, with battery modules and top conduit kits installed at the Eaton Raleigh, NC facility. This feature will reduce installation time in the field and minimize the risk of lost parts on site. The UPS can be commissioned earlier and be ready for customer use sooner.

The cabinet designed by Eaton will feature Samsung batteries offering 32 or 34 kWh per cabinet. The BMS will now have the option of being powered by internal DC Bus or both external AC power and DC Bus simultaneously. The cabinet is eligible for Samsung's 12 Year Performance Guarantee Warranty. All Gen3 cabinets also come standard with a data logger which records all necessary information to maintain the warranty. The current Samsung offering will be end-of-life December 2024.

Please reach out to DCCG for concerns regarding the transition from Samsung Gen 2 to Gen 3. Eaton's Samsung Gen3 Battery Cabinet is now live in Bidman. Quote to customers today!

The cabinet is UL9540A tested and UL1973 Listed.

The battery modules are manufactured by Samsung in South Korea. The battery cabinets are assembled in Raleigh, NC. When a customer purchases a battery cabinet, the product qualifies for FAR 52.225-1 (Buy American- Supplies).
